INTRODUCING OFFICE 365 SECURITY HEALTH CHECK

PROTECT YOUR CLOUD DATA WITH THE MOST SECURE OFFICE 365 SETUP.

As technology evolves, many organizations have moved from local servers to the cloud with Microsoft Office 365. But often, when the move is made not all of O365's powerful security features are enabled. Whether they were turned off to make a quicker or cheaper move or you thought the cloud automatically defaulted to the most secure option, you may not be as protected as you should be. Security Health Check evaluates your current security settings against best practices to ensure your organization and its employees are operating as securely as possible. The best plan is prevention. We'll help evaluate, identify and advise on filling any security gaps in your Office 365 setup, all at a convenient set package price.

BE HEALTHY. BE SECURE. **BE SURE.**

- Validate your recent migration.
- Revisit a past migration to ensure new best practice features released since the migration are in place.
- Identify any risk tied to an existing cloud deployment.
- Identify areas where security could be supplemented to add additional protection.
- Keep up to date with Microsoft's constantly evolving security features to combat new threats like phishing and ransomware.
- Track Office 365 administrator activity & know who has access to your Office 365 environment.

COMPREHENSIVE EVALUATION. **CONVENIENT PACKAGE.**

O365 Security Health Check includes:

O365 Security best practices general review

with additional specifics related to SharePoint/OneDrive, Teams, Email and Skype environments.

Best practices report noting current security settings and remediation recommendations for any areas where current settings and controls are found to be deficient.

Recommendations for compliant areas

where security posture could potentially be increased.
